Nisshin Pharmaceutical Industries CO.,Ltd

Company History

Long ago, a descendant of the Koga ninja used his vast knowledge and experience with medicinal herbs to sell medicines throughout the country as a monk. During the Meiji period, pharmaceutical production in the area began in earnest. It is no exaggeration to say that Koga people have grown up with medicine.

When we were young, there would always be a pharmaceutical factory near the streets and alleys where we hid when playing ninja, or the schools we attended. Every household has some commonly used medicines in its drawers. When I went on a field trip to a large pharmaceutical factory with great interest, Yingran was still fresh in my mind.

We truly love our pharmaceutical work. This is the "pride and pride" inherited from our distant ancestors.

Company Introduction
